SAFETY PRECAUTIONS

- Do not attempt to install this air conditioner by yourself.
- This air conditioner contains no user-serviceable parts. Always consult authorized service personnel for repairs.
- When moving, consult authorized service personnel for disconnection and installation of the air conditioner.
- Do not become excessively chilled by staying for many hours in the direct cooling airflow.
- Do not insert fingers or objects into the outlet port or intake grille.
- Do not start and stop air conditioner operation by disconnecting the power supply cord and so on.
- Take care not to damage the power supply cord.
- In the event of a malfunction (burning smell, etc.), immediately stop operation, disconnect the power supply plug, and consult authorized service personnel.
- If the power supply cord of this appliance is damaged, it should only be replaced by the authorized service personal, since special purpose tools and specified cord are required.
- Provide occasional ventilation during use.
- Do not direct airflow at fireplaces or heating apparatus.
- Do not climb on, or place objects on, the air conditioner.
- Do not hang objects from the indoor unit.
- Do not set flower vases or water containers on top of air conditioners.
- Do not expose the air conditioner directly to water.
- Do not operate the air conditioner with wet hands.
- Turn off power supply when not using the indoor unit for extended periods.
- Check the condition of the installation stand for damage.
- Do not place animals or plants in the direct path of the airflow.
- If the power supply cord of this appliance is damaged, it should only be replaced by authorized service personnel.
- Ensure that any electronic equipment is at least one meter away from either the indoor or outdoor units.
- Avoid installing the air conditioner near a fireplace or other heating apparatus.
- When installing the indoor and outdoor unit, take precautions to prevent access to infants.
- Do not use inflammable gases near the air conditioner.
SAFETY PRECAUTIONS

- Do not attempt to install this air conditioner by yourself.
- This air conditioner contains no serviceable parts. Always consult authorized service personnel for repairs.
- When moving, consult authorized service personnel for disconnection and installation of the air conditioner.
- Do not become excessively chilled by staying for many hours in the direct cooling air flow.
- Do not insert fingers or objects into the outlet port or intake grille.
- Do not start and stop air conditioner operation by disconnecting the power supply cord and so on.
- Take care not to damage the power supply cord.
- In the event of a malfunction (burning smell, etc.), immediately stop operation, disconnect the power supply plug, and consult authorized service personnel.
- If the power supply cord of this appliance is damaged, it should only be replaced by the authorized service personnel, since special purpose tools and specified cord are required.
- Provide occasional ventilation during use.
- Do not direct airflow at fireplaces or heating apparatus.
- Do not climb on, or place objects on, the air conditioner.
- Do not hang objects from the indoor unit.
- Do not set flower vases or water containers on top of air conditioners.
- Do not expose the air conditioner directly to water.
- Do not operate the power supply cord with wet hands.
- Do not apply any heavy pressure to radiator fins.
- Operate only with air filters installed.
- Do not block or cover the intake grille and outlet port.
- Ensure that any electronic equipment is at least one meter away from either the indoor or outdoor units.
- Avoid installing the air conditioner near a fireplace or other heating appliance.
- When installing the indoor and outdoor unit, take precautions to prevent access to infants.
- Do not use inflammable gases near the air conditioner.

To facilitate explanation, the accompanying illustration has been drawn to show all possible indicators. In actual operation, however, the display will only show those indicators appropriate to the current operation.
FEATURES AND FUNCTIONS

**INVERTER**
At the start of operation, a large power is used to bring the room quickly to the desired temperature. Afterward, the air conditioner automatically switches to a low power setting for economic and comfortable operation.

**AUTO CHANGEOVER**
The operation mode (cooling, dry) is switched automatically to maintain the set temperature, and the temperature is kept constant at all times.

**PROGRAM TIMER**
The program timer allows you to integrate OFF timer and ON timer operations in a single sequence. The sequence can involve one transition from OFF timer to ON timer, or from ON timer to OFF timer, within a twenty-four hour period.

**SLEEP TIMER**
When the SLEEP button is pressed during cooling mode, the thermostat setting is gradually raised during the period of operation. When the set time is reached, the indoor unit automatically turns off.

**SWING OPERATION**
The Air Flow Direction Louvers swings automatically up and down so that the air speeds to every nook and corner of your room.

**REMOVABLE INTAKE GRILLE**
The indoor unit’s Intake Grille can be removed for easy cleaning and maintenance.

**MILDEW-RESISTANT FILTER**
The AIR FILTER has been treated to resist mildew growth, thus allowing cleaner use and easier care.

**SUPER QUIET OPERATION**
When the FAN CONTROL button is used to select QUIET, the indoor unit begins super-quiet operation; the indoor unit’s airflow is reduced to produce quieter operation.

**POLYPHENOL CATECHIN AIR CLEANING FILTER**
The polyphenol catechin air cleaning filter uses static electricity to clean fine particles and dust in the air such as tobacco smoke and plant pollen that are too small to see. The filter contains catechin, which is highly effective against various bacteria by suppressing the growth of the bacteria adsorbed to the filter. Note that when the air cleaning filter is installed, the amount of air produced decreases, causing a slight decrease in the indoor unit’s performance.

**NEGATIVE AIR IONS DEODORIZING FILTER**
It comprises pottery super micro particles which can produce negative air ions having the effect of deodorizing and can absorb and remit the peculiar smell at home.
NAME OF PARTS

**Fig. 1 Indoor Unit**
1. Operating Control Panel (Fig. 2)
   - MANUAL AUTO button
     - When kept on pressing the MANUAL AUTO button for more than 10 seconds, the forced cooling operation will start.
     - The forced cooling operation is used at the time of installation. Only for authorized service personnel’s use.
   - MASTER CONTROL button
   - SLEEP button
   - TIMER MODE button
   - FAN CONTROL button
   - START/STOP button
   - SET TEMP. button (▲/▼)
   - TIMER SET (▲/▼) button
   - CLOCK ADJUST button
   - TEST RUN button

2. Indicator (Fig. 3)
   - Remote Control Signal Receiver
   - OPERATION Indicator Lamp (green)
   - TIMER Indicator Lamp (orange)
     - If the TIMER indicator lamp flashes when the timer is operating, it indicates that a fault has occurred with the timer setting (See Page 14 Auto Restart).
   - SUPER QUIET Indicator Lamp (yellow)

3. Intake Grille (Fig. 4)
4. Front Panel
5. Air Filter
6. Air Flow Direction Louver
7. Right-Left Louver (behind Air Flow Direction Louver)
8. Drain Hose
9. Power Supply Plug
10. Power Supply Cord
11. Air Cleaning Filter

**Fig. 5 Outdoor Unit**
1. Intake Port
2. Outlet Port
3. Pipe Unit
4. Drain port (bottom)

**Fig. 6 Remote Control Unit**
1. Signal Transmitter
2. MASTER CONTROL button
3. SLEEP button
4. TIMER MODE button
5. FAN CONTROL button
6. START/STOP button
7. SET TEMP. button (▲/▼)
8. SET button
9. SWING button
10. TIMER SET (▲/▼) button
11. CLOCK ADJUST button
12. TEST RUN button
   - This button is used when installing the conditioner, and should not be used under normal conditions, as it will cause the air conditioner’s thermostat function to operate incorrectly.
   - If this button is pressed during normal operation, the unit will switch to test operation mode, and the Indoor Unit's OPERATION Indicator Lamp and TIMER Indicator Lamp will begin to flash simultaneously.
   - To stop the test operation mode, press the START/STOP button to stop the air conditioner.

13. RESET button

14. Remote Control Unit Display (Fig. 7)
   - Transmit Indicator
   - Temperature SET Display
   - Fan Speed Display
   - Operating Mode Display
   - SWING Display
   - SLEEP Display
   - Timer Mode Display
   - Clock Display

- Refer to the folded out page on the cover.
**PREPARATION**

### Turn on the Power

1. Connect the Power Supply Plug (Fig. 1) to an electrical outlet; in the case of a direct line connection, turn on the circuit breaker.

### Load Batteries (Size AAA R03/LR03 × 2) *

1. Press and slide the battery compartment lid on the reverse side to open it.
   - Slide in the direction of the arrow while pressing the mark.
   - * Batteries are not included with this product.

2. Insert batteries.
   - Be sure to align the battery polarities correctly.

3. Close the battery compartment lid.

### Set the Current Time

1. Press the CLOCK ADJUST button (Fig. 6). Use the tip of a ball-point pen or other small object to press the button.

2. Use the TIMER SET ( / ) buttons (Fig. 6) to adjust the clock to the current time.
   - button: Press to advance the time.
   - button: Press to reverse the time.
   - (Each time the buttons are pressed, the time will be advanced/reversed in one-minute increments; hold the buttons depressed to change the time quickly in ten-minute increments.)

3. Press the CLOCK ADJUST button (Fig. 6) again.
   - This completes the time setting and starts the clock.

### To Use the Remote Control Unit

- The Remote Control Unit must be pointed at signal receiver (Fig. 3) to operate correctly.
- Operating Range: About 7 meters.
- When a signal is properly received by the air conditioner, a beeping sound will be heard.
- If no beep is heard, press the Remote Control Unit button again.

### Remote Control Unit Holder

- Mount the Holder.
- Set the Remote Control Unit.
- To remove the Remote Control Unit (when use at hand).

---

* Batteries are not included with this product.
* Never mix new and used batteries, or batteries of different types.
* Batteries should last about one year under normal use. If the Remote Control Unit’s operating range becomes appreciably reduced, replace the batteries and press the RESET button with the tip of a ballpoint pen or other small object.
* Dead batteries should be removed immediately and disposed of properly, either in a battery collection receptacle or to the appropriate authority.
OPERATION

To Select Mode Operation

1. Press the START/STOP button (Fig. 6). The indoor unit’s OPERATION Indicator Lamp (green) (Fig. 3) will light. The air conditioner will start operating.

2. Press the MASTER CONTROL button (Fig. 6) to select the desired mode. Each time the button is pressed, the mode will change in the following order:

   AUTO → COOL → DRY → FAN

   About three seconds later, the entire display will reappear.

To Set the Thermostat

Press the SET TEMP. button (Fig. 6).

button: Press to raise the thermostat setting.
button: Press to lower the thermostat setting.

- Thermostat setting range:
  AUTO: 18-30 °C
  Cooling/Dry: 18-30 °C

   The thermostat cannot be used to set room temperature during the FAN mode (the temperature will not appear on the Remote Control Unit’s Display).

   About three seconds later, the entire display will reappear.

   The thermostat setting should be considered a standard value, and may differ somewhat from the actual room temperature.

To Set the Fan Speed

Press the FAN CONTROL button (Fig. 6).

Each time the button is pressed, the fan speed changes in the following order:

   AUTO → HIGH → MED → LOW → QUIET

   About three seconds later, the entire display will reappear.

When set to AUTO:

   Cooling: As the room temperature approaches that of the thermostat setting, the fan speed becomes slower.
   Fan: The fan runs at the low fan speed.

   The fan will operate at a very low setting during Monitor operation.

SUPER QUIET Operation

When set to Quiet:

   SUPER QUIET Indicator Lamp (yellow) (Fig. 3) will light.
   SUPER QUIET operation begins. The indoor unit’s airflow will be reduced for quieter operation.
   - SUPER QUIET operation cannot be used during Dry mode. (The same is true when dry mode is selected during AUTO mode operation.)
   - During Super Quiet operation, Cooling performance will be reduced somewhat. If the room does not cool down when using SUPER QUIET Operation, please adjust the air conditioner’s Fan Speed.
To Stop Operation

Press the START/STOP button (Fig. 6). The OPERATION Indicator Lamp (green) (Fig. 3) will go out.

**About AUTO CHANGEOVER Operation**

**AUTO:**

- When AUTO CHANGEOVER operation first selected, the fan will operate at very low speed for about one minute, during which time the unit detects the room conditions and selects the proper operating mode.

  If the difference between thermostat setting and actual room temperature is more than +2 °C → Cooling or dry operation

  If the difference between thermostat setting and actual room temperature is within ±2 °C → Monitor operation

- When the air conditioner has adjusted your room’s temperature to near the thermostat setting, it will begin monitor operation. In the monitor operation mode, the fan will operate at low speed. If the room temperature subsequently changes, the air conditioner will once again select the appropriate operation (Cooling) to adjust the temperature to the value set in the thermostat.
  (The monitor operation range is ±2 °C relative to the thermostat setting.)
- If the mode automatically selected by the unit is not what you wish, select one of the mode operation (COOL, DRY, FAN).

**About Mode Operation**

- **Cooling:**
  - Use to cool your room.
- **Dry:**
  - Use for gently cooling while dehumidifying your room.
  - You cannot heat the room during Dry mode.
  - During Dry mode, the unit will operate at low speed; in order to adjust room humidity, the indoor unit’s fan may stop from time to time. Also, the fan may operate at very low speed when adjusting room humidity.
  - The fan speed cannot be changed manually when Dry mode has been selected.
- **Fan:**
  - Use to circulate the air throughout your room.

**During Cooling/Dry mode:**
Set the thermostat to a temperature setting that is lower than the current room temperature. The Cooling and Dry modes will not operate if the thermostat is set higher than the actual room temperature (in Cooling mode, the fan alone will operate).

**During Fan mode:**
You can not use the unit to heat and cool your room.
**TIMER OPERATION**

Before using the timer function, be sure that the Remote Control Unit is set to the correct current time (☞ P. 4).

### To Use the ON timer or OFF timer

1. **Press the START/STOP button** (Fig. 6 ☞) *(if the unit is already operating, proceed to step 2).*
   The indoor unit’s OPERATION Indicator Lamp (green) (Fig. 3 ☞) will light.

2. **Press the TIMER MODE button** (Fig. 6 ☜) to select the OFF timer or ON timer operation.
   Each time the button is pressed the timer function changes in the following order:
   - CANCEL → OFF → ON
     - PROGRAM(OFF → ON, OFF ← ON)
   The indoor unit’s TIMER Indicator Lamp (orange) (Fig. 3 ☞) will light.

3. **Use the TIMER SET buttons** (Fig. 6 ☜) to adjust the desired OFF time or ON time.
   Set the time while the time display is flashing (the flashing will continue for about five seconds).
   - ▼ button: Press to advance the time.
   - ▲ button: Press to reverse the time.
   About five seconds later, the entire display will reappear.

### To Use the Program timer

1. **Press the START/STOP button** (Fig. 6 ☞).
   *(if the unit is already operating, proceed to step 2).*
   The indoor unit’s OPERATION Indicator Lamp (green) (Fig. 3 ☞) will light.

2. **Set the desired times for OFF timer and ON timer.**
   See the section “To Use the ON timer or OFF timer” to set the desired mode and times.
   About three seconds later, the entire display will reappear.
   The indoor unit’s TIMER Indicator Lamp (orange) (Fig. 3 ☞) will light.

3. **Press the TIMER MODE button** (Fig. 6 ☜) to select the PROGRAM timer operation *(OFF → ON or OFF ← ON will display).*
   The display will alternately show “OFF timer” and “ON timer”, then change to show the time setting for the operation to occur first.
   ● The program timer will begin operation. *(If the ON timer has been selected to operate first, the unit will stop operating at this point.)*
   About five seconds later, the entire display will reappear.

### About the Program timer

- The program timer allows you to integrate OFF timer and ON timer operations in a single sequence. The sequence can involve one transition from OFF timer to ON timer, or from ON timer to OFF timer, within a twenty-four hour period.
- The first timer function to operate will be the one set nearest to the current time. The order of operation is indicated by the arrow in the Remote Control Unit’s Display *(OFF → ON, or OFF ← ON).*
- One example of Program timer use might be to have the air conditioner automatically stop (OFF timer) after you go to sleep, then start (ON timer) automatically in the morning before you arise.

---

**To Cancel the Timer**

Use the TIMER button to select “CANCEL”.
The air conditioner will return to normal operation.

**To Change the Timer Settings**

Perform steps 2 and 3.

**To Stop Air Conditioner Operation while the Timer is Operating**

Press the START/STOP button.

**To Change Operating Conditions**

If you wish to change operating conditions *(Mode, Fan Speed, Thermostat Setting, SUPER QUIET mode)*, after making the timer setting wait until the entire display reappears, then press the appropriate buttons to change the operating condition desired.
SLEEP TIMER OPERATION

Unlike other timer functions, the SLEEP timer is used to set the length of time until air conditioner operation is stopped.

To Use the SLEEP Timer

While the air conditioner is operating or stopped, press the SLEEP button (Fig. 6). The indoor unit’s OPERATION Indicator Lamp (green) (Fig. 3) lights and the TIMER Indicator Lamp (orange) (Fig. 3) light.

To Change the Timer Settings

Press the SLEEP button (Fig. 6) once again and set the time using the TIMER SET ( / ) buttons (Fig. 6). Set the time while the Timer Mode Display is flashing (the flashing will continue about five seconds).

button: Press to advance the time.
button: Press to reverse the time.

About five seconds later, the entire display will reappear.

About the SLEEP Timer

To prevent excessive cooling during sleep, the SLEEP timer function automatically modifies the thermostat setting in accordance with the set time setting. When the set time has elapsed, the air conditioner completely stops.

During Cooling/Dry operation:
When the SLEEP timer is set, the thermostat setting is automatically raised 1 °C every sixty minutes. When the thermostat has been raised a total of 2 °C, the thermostat setting at that time is maintained until the set time has elapsed, at which time the air conditioner automatically turns off.

SLEEP timer setting

MANUAL AUTO OPERATION

Use the MANUAL AUTO operation in the event the Remote Control Unit is lost or otherwise unavailable.

How To Use the Main Unit Controls

Press the MANUAL AUTO button (Fig. 2) for three seconds on the main unit control panel. To stop operation, press the MANUAL AUTO button (Fig. 2) for three seconds.

- When the air conditioner is operated by the controls on the Main Unit, it will operate under the same mode as the AUTO mode selected on the Remote Control Unit (see page 6).
- The fan speed selected will be “AUTO” and the thermostat setting will be standard (24°C).
ADJUSTING THE DIRECTION OF AIR CIRCULATION

Vertical (up-down) direction of airflow is adjusted by pressing the Remote Control Unit’s SET button. Horizontal (right-left) airflow direction is adjusted manually, by moving the Air Flow DirectionLouvers. Whenever making horizontal airflow adjustments, start air conditioner operation and be sure that the vertical air direction louvers are stopped.

Vertical Air Direction Adjustment

Press the SET button (Fig. 6). Each time the button is pressed, the air direction range will change as follows:

1  2  3  4  5  6

Types of Airflow Direction Setting:

1,2,3: During Cooling/Dry modes
1,2,3,4,5,6: During Fan mode

The Remote Control Unit’s display does not change.

Use the air direction adjustments within the ranges shown above.

The vertical airflow direction is set automatically as shown, in accordance with the type of operation selected.

- During Cooling/Dry/Fan mode: Horizontal flow 1
- During AUTO mode operation, for the first one minute after beginning operation, airflow will be horizontal 1; the air direction cannot be adjusted during this period.

Right-Left Adjustment

Adjust the Right-Left louvers.

Move the Right-Left louvers to adjust airflow in the direction you prefer.

DANGER!

- Never place fingers or foreign objects inside the outlet ports, since the internal fan operates at high speed, and personal injury could be caused.

Always use the Remote Control Unit’s SET button to adjust the vertical airflow louvers. Attempting to move them manually could result in improper operation; in this case, stop operation and restart. The louvers should begin to operate properly again.

During use of the Cooling and Dry modes, do not set the Airflow Direction Louvers in the range (4 - 6) for many hours, since water vapor may condense near the outlet louvers and drops of water may drip from the indoor unit. During the Cooling and Dry modes, if the Airflow Direction Louvers are left in the range (4 - 6) for more than 30 minutes, they will automatically return to position 1.

When used in a room with infants, children, elderly or sick persons, the airflow direction and room temperature should be considered carefully when making settings.

DANGER!

- When adjusting the Right-Left Louvers, it is necessary to stop the Air-Conditioner first and make sure that it stops completely before adjusting the direction.
SWING OPERATION

Begin air conditioner operation before performing this procedure.

To select SWING Operation

Press the SWING button (Fig. 6). The SWING Display (Fig. 7) will light. In this mode, the Air Flow Direction Louvers will swing automatically to direct the air flow both up and down.

To stop SWING Operation

Press the SWING button (Fig. 6) once again. The SWING Display (Fig. 7) will go out. Air flow direction will return to the setting before swing was begun.

About Swing Operation

● The SWING operation may stop temporarily when the air conditioner’s fan is not operating, or when operating at very low speeds.
● The range of swing is relative to the currently set airflow direction.
  During Cooling/Dry mode: Swings between ① and ③.
  During Fan mode: Swings between ① and ③ or ③ and ⑥.

CLEANING AND CARE

⚠️ CAUTION!

● Before cleaning the indoor unit, be sure to turn it off and disconnect the Power Supply Cord.
● Be sure the Intake Grille (Fig. 1) is installed securely.
● When removing or replacing the air filters, be sure not to touch the heat exchanger, as personal injury may result.

● To avoid excessive wear of the part and components or malfunctioning of the air conditioning, the user/consumer shall perform preventive maintenance through an accredited technical assistance, periodically. To know the preventive maintenance periodicity, the consumer shall check with the accredited installer or an accredited technical assistance.
● When used for extended periods, the unit may accumulate dirt inside, reducing its performance. We recommend that the unit be inspected regularly, in addition to your own cleaning and care. For more information, consult authorized service personnel.
● It is recommended for the user/consumer to demand a copy of the Work Order every time there is a visit of a technical assistance for verification, maintenance, test or repair of the product.
● When cleaning the unit’s body, do not use water hotter than 40 °C, harsh abrasive cleansers, or volatile agents like benzene or thinner.
● Do not expose the unit body to liquid insecticides or hairsprays.
● When shutting down the unit for one month or more, first allow the fan mode to operate continuously for about one-half day to allow internal parts to dry thoroughly.
CLEANING AND CARE

Cleaning the Intake Grille

1. Remove the Intake Grille.
   1. Place your fingers at both lower ends of the grille panel, and lift forward; if the grille seems to catch partway through its movement, continue lifting upward to remove.
   2. Pull past the intermediate catch and open the Intake Grille wide so that it become horizontal.

2. Clean with water.
   Remove dust with a vacuum cleaner; wipe the indoor unit with warm water, then dry with a clean, soft cloth.

3. Replace the Intake Grille.
   1. Pull the knobs all the way.
   2. Hold the grille horizontal and set the left and right mounting shafts into the bearings at the top of the panel.
   3. Press the place where the arrow on the diagram indicates and close the Intake Grille.

Cleaning the Air Filter

1. Open the Intake Grille, and remove the air filter.
   Lift up the air filter’s handle, disconnect the two lower tabs, and pull out.

2. Remove dust with a vacuum cleaner or by washing.
   After washing, allow to dry thoroughly in a shaded place.

3. Replace the Air Filter and close the Intake Grille.
   1. Align the sides of the air filter with the panel, and push in fully, making sure the two lower tabs are returned properly to their holes in the panel.
   2. Close the Intake Grille.
      (For purposes of example, the illustration shows the indoor unit without Intake Grille installed.)

   ● Dust can be cleaned from the air filter either with a vacuum cleaner, or by washing the filter in a solution of neutral detergent and warm water. If you wash the filter, be sure to allow it to dry thoroughly in a shady place before reinstalling.
   ● If dust is allowed to accumulate on the air filter, airflow will be reduced, lowering operating efficiency and increasing noise.
   ● During periods of normal use, the Air Filters should be cleaned every two weeks.
   ● Don't operate the air conditioner with being opened the intake grille.
CLEANING AND CARE

Air Cleaning Filter Installation

1. Open the Intake Grille and remove the Air filters.

2. Attach the air cleaning filter to the frame of the front panel.
   ● Attach the filter on the inside of the tabs (6 places) so as not to stick out.

3. Replace them by two new Air cleaning filters.
   ① Remove the old air cleaning filters in reverse order of their installation.
   ② Install in the same way as for installation of the air cleaning filter set.

4. Install the two Air filters and close the Intake Grille.
   ● Don’t operate the air conditioner with being opened the intake grille.
   ● Don’t operate the air conditioner with being opened the intake grille.
   ● When air cleaning filters are used, the effect will increased by setting the fan speed to “High”.

Replacing dirty Air cleaning filters

Replace filters with the following components (purchased separately).
● POLYPHENOL CATECHIN AIR CLEANING FILTER : UTR-FA16
● Negative air ions deodorizing filter: UTR-FA16-2

1. Open the Intake Grille and remove the Air filters.

2. Remove the air cleaning filters attached to the frames of the front panel.

   Air cleaning filter frame

3. Replace them by two new Air cleaning filters.

   POLYPHENOL CATECHIN AIR CLEANING FILTER (one sheet)
   ● The Air Cleaning Filters are disposable filters. (They can not be washed and reused.)
   ● For storage of the Air Cleaning Filters, use the filters as soon as possible after opening the package.
     (The air cleaning effect decreases when the filters are left in the opened package)
   ● Generally, the filters should be exchanged about every three months.

   Please buy designed air cleaning filters (UTR-FA16) (Sold separately) to exchange the used dirty air cleaning filter.

   Negative air ions deodorizing filter (one sheet) — light blue
   ● The filter should be exchanged about every three years so as to maintain the deodorizing effect.

   Please buy designed deodorizing filter (UTR-FA16-2) (Sold separately) when exchanging the filter.

Maintenance of Deodorizing Filters

In order to maintain the deodorizing effect, please clean the filter in the follow way once three months.
   ① Remove the deodorizing filter.
   ② Clean with water and dry in the air.
     1) Flush the filter with high-pressure hot water until the surface of the filter is covered with water. Please flush with diluent neutral detergent.
       Never wash by reaming or rubbing, otherwise it will damage the deodorizing effect.
     2) Rinse with water flow.
     3) Dry in shade.
   ③ Reinstall the deodorizing filter.
### TROUBLESHOOTING

**WARNING!**
In the event of a malfunction (burning smell, etc.), immediately stop operation, turn off the electrical breaker or disconnect the power supply plug, and consult authorized service personnel. Merely turning off the unit’s power switch will not completely disconnect the unit from the power source. Always be sure to turn off the electrical breaker or disconnect the power supply plug to ensure that power is completely off.

Before requesting service, perform the following checks:

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Problem</th>
<th>See Page</th>
</tr>
</thead>
</table>
| NORMAL FUNCTION          |  ● If the unit is stopped and then immediately started again, the compressor will not operate for about 3 minutes, in order to prevent fuse blowouts.  
   ● Whenever the Power Supply Plug is disconnected and then reconnected to a power outlet, the protection circuit will operate for about 3 minutes, preventing unit operation during that period. |          |
| Noise is heard:          |  ● During operation and immediately after stopping the unit, the sound of water flowing in the air conditioner’s piping may be heard. Also, noise may be particularly noticeable for about 2 to 3 minutes after starting operation (sound of coolant flowing).  
   ● During operation, a slight squeaking sound may be heard. This is the result of minute expansion and contraction of the front cover due to temperature changes. |          |
| Smells:                  |  ● Some smell may be emitted from the indoor unit. This smell is the result of room smells (furniture, tobacco, etc.) which have been taken into the air conditioner. |          |
| Mist or steam are emitted: |  ● During Cooling or Dry operation, a thin mist may be seen emitted from the indoor unit. This results from the sudden Cooling of room air by the air emitted from the air conditioner, resulting in condensation and misting. |          |
| Airflow is weak or stops: |  ● The fan may operate at very low speed during Dry operation or when the unit is monitoring the room’s temperature.  
   ● During SUPER QUIET operation, the fan will operate at very low speed.  
   ● In the monitor AUTO operation, the fan will operate at very low speed. | 5 5 5 |
| CHECK ONCE MORE           | Doesn’t operate at all:  
   ● Is the Power Supply Plug disconnected its outlet?  
   ● Has there been a power failure?  
   ● Has a fuse blown out, or a circuit breaker been tripped?  
   ● Is the timer operating? | 7-8 |
| Poor Cooling performance: |  ● Is the Air Filter dirty?  
   ● Air the air conditioner’s intake grille or outlet port blocked?  
   ● Did you adjust the room temperature settings (thermostat) correctly?  
   ● Is there a window or door open?  
   ● In the case of Cooling operation, is a window allowing bright sunlight to enter? (Close the curtains.)  
   ● In the case of Cooling operation, are there heating apparatus and computers inside the room, or are there too many people in the room? |          |
| The unit operates differently from the Remote Control Unit’s setting: |  ● Is the unit set for SUPER QUIET operation? | 5 |

If the problem persists after performing these checks, or if you notice burning smells, or the OPERATION Indicator Lamp (Fig. 3 ⑤) and the TIMER Indicator Lamp (Fig. 3 ⑥) flashes, immediately stop operation, disconnect the Power Supply Plug (Fig. 1 ⑤), and consult authorized service personnel.

En-13
**OPERATING TIPS**

**AUTO Restart**

**In Event of Power Interruption**

- The power supply to the air conditioner is stopped by a power interruption. The air conditioner will then restart automatically in its previous mode when the power is restored.

- If a power interruption occurs during TIMER operation, the timer will be reset and the indoor unit will begin (or stop) operation at the new time setting. In the event that this kind of timer fault occurs, the TIMER Indicator Lamp will flash (see Page. 3).

- Use of other electrical appliances (electric shaver, etc.) or nearby use of a wireless radio transmitter may cause the air conditioner to malfunction. In this event, temporarily disconnect the Power Supply Plug, reconnect it, and then use the Remote Control Unit to resume operation.

- If the air conditioner is used under higher temperature conditions than those listed, the built-in protection circuit may operate to prevent internal circuit damage. Also, during Cooling and Dry modes, if the air conditioner is used under conditions of lower temperature than those listed above, the heat-exchanger may freeze, leading to water leakage and other damage.

- Do not use this air conditioner for any purposes other than the Cooling, Dehumidifying, and air-circulation of rooms in ordinary dwellings.

- If the air conditioner is used for many hours under high-humidity conditions about 80% or more, condensation may form on the surface of the indoor unit, and drip onto the floor or other objects underneath.
